Communication Plan

Date: 1 November 2026 | Team ID: Not provided — enter the official assigned Team ID before submission | Project: F1 Race Intelligence: Formula 1 Performance Analytics using Tableau

Communication plan

This is a proposed communication plan for a solo academic project. Replace frequencies with actual records if the evaluator expects evidence of meetings.

Communication channels

Progress updates — weekly — project checklist / README — author — track deliverables and blockers.

Issue/bug discussion — as needed — GitHub Issues or project notes — author — record reproduction steps, fix and retest.

Stakeholder review — at milestone — Tableau story and website links — author/evaluator — collect feedback.

Demo rehearsal — once before submission — local browser and Tableau Public — author — confirm links, narration and screen visibility.

Final submission — once — Google Drive and GitHub — author/evaluator — provide accessible links.

Challenges and resolutions

Challenge: chart names and filters may not be fully documented from screenshots. Resolution: inspect saved Tableau workbook and report only verified views.

Challenge: missing values can be misread. Resolution: preserve nulls, document their distribution and distinguish unknown from zero.

Challenge: public link access. Resolution: test Tableau, GitHub Pages and Google Drive links in a signed-out/private browser.
